JeanMartin SharePoint Offerings

We have successfully developed, deployed and managed numerous SharePoint Portal Server based solutions. Portals developed include e-commerce sites, extranet and migration scenarios. Our solutions go beyond basic workflows, support thousands of users and are enterprise ready.

Portal Development

Each Portal development starts with analyzing RAD requirements and mapping SharePoint Web parts, Forms and Workflows to the customer requirements. A Prototype is developed and generally it becomes the basis of enterprise development. Custom Web parts are developed where ever necessary.

Enterprise SharePoint deployments result in multiple simple to complex intranet sites development. We work with our customers to develop a comprehensive roadmap for company, department and team oriented intranet sites besides assisting them in development and manageability across lifecycle.

Intranet Sites

Our unique provisioning system enables our customers to automate the site provisioning process. Employees can create their own intranet sites by filling up a simple form. All standard and custom web parts are available for use. Simple to complex workflows can be added with a click of a button.

Many of our customer choose to host their SharePoint deployments in our SaaS (Software as a service) environment. The hosted customers enjoy all benefits of an enterprise deployment without up front costs. The technology upgrades are seamless and transparent. Solutions are fully multi-tenet.

Hosted SharePoint

Our hosted SharePoint solutions enable the customer to start small and gradually scale up based on their business needs. The technology solution along with unique licensing model provides a predictable TCO. We have also enabled many of our customers to partner in Build-Operate-Transfer models.

We have helped one of our major Healthcare customer to enable an enterprise wide content management solution that involved integration with Documentum and FileNet using SharePoint based adapters. Unique search capabilities provided a unique value add to the ECM feature set.

Enterprise Content Management

Microsoft SharePoint Enterprise Search capabilities have got a major boost with inclusion of new search features and industry wide adapters for major ECM suites. Further search can be easily extended into web services, middleware frameworks and semantic searches on Internet.

A unique JeanMartin offering for Microsoft SharePoint Server. The SharePoint Appliance includes a plug and play bundle that provides an end to end Document Management, scanning, imaging and printing solution besides optimized complex search engine and is extensible to JM SaaS network.

SharePoint Appliance

Plug a SharePoint Appliance. Scaling is as simple as adding a new appliance thereby increasing search and storage capabilities. Solution is extremely secure, integrates with your network seamlessly and can be hosted outside your enterprise with ease, not to mention the additional storage provided in JM SaaS network.
